

Installation

Introduction

SuperPaste is an Add-in to Microsoft Word. To use SuperPaste, it must first be installed onto your computer using the **SuperPaste.msi** file. You will also need to obtain a license key from CheckPoint.

Requirements

- Windows 7 or Windows 10
- Microsoft Office 2010, 2013 or 2016
- .NET 4.0 installed (this should automatically be available on computers with Windows 7 onwards, provided the latest updates have been applied)

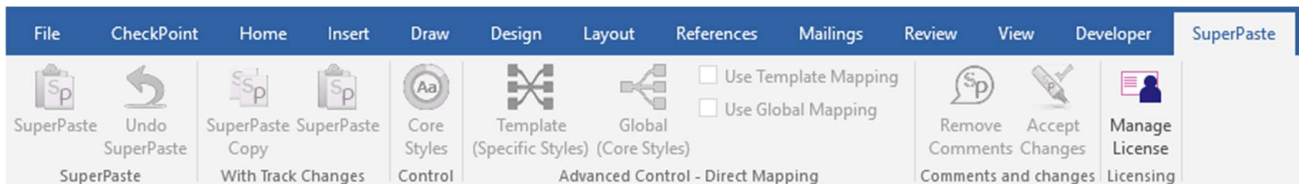

Licensing

A unique license key is required for each installation of SuperPaste. You can move the license key to another computer by deactivating the key on the existing computer and then re-activating it on a new machine.

Installation Process

- Run the **SuperPaste.msi** installer file by double clicking on it
- Follow the installer instructions – do not change the installation folder location

Once installed, on opening Word, you should see a SuperPaste tab on the ribbon (as shown below)

Activating SuperPaste

To activate SuperPaste, you will need the activation key provided by CheckPoint.

- Click on the Manage License button on the SuperPaste ribbon
- Choose Activate my license online
- Enter the activation key and click OK
- Click Finish

After a few seconds, the greyed out buttons on the SuperPaste ribbon should become active and SuperPaste is ready to use.
